Professional Summary

Site Reliability Engineer with 5 years of experience supporting reliable AWS and Kubernetes production environments. Skilled in AWS, EKS, Terraform, Python, Shell, Jenkins, Docker, Kubernetes, Prometheus, Grafana, Ansible, monitoring, incident management, RCA, troubleshooting, and automation. Experienced in reducing operational toil, improving observability, deployment reliability, and production stability.

Technical Skills

AWS: EC2, EKS, ECR, VPC, S3, EBS, EFS, RDS, IAM, KMS, CloudWatch, CloudFront, CloudTrail

SRE & DevOps: Production Support, Incident Management, RCA, Troubleshooting, Release Management, CI/CD, Jenkins, Git, Terraform, Ansible, GitOps

Kubernetes: Kubernetes, Amazon EKS, Docker, Helm, Argo CD, NGINX Ingress, Istio, ECR

Automation: Python, Shell, Terraform, Ansible

Monitoring & Observability: Prometheus, Grafana, CloudWatch, New Relic

Security: HashiCorp Vault, IAM, RBAC, SonarQube, Trivy

Systems & Databases: Linux, RHEL, MySQL, NoSQL, SQL Server, PostgreSQL

Reliability: HA/DR, Monitoring, Alerting, Deployment Automation, Cost Optimization, SOPs

Professional Experience

Tata Consultancy Services (TCS) | Hyderabad, India

Site Reliability Engineer

Dec 2021 – Aug 2026

- Supported AWS and Kubernetes production environments across EC2, EKS, ECR, VPC, S3, RDS, IAM, KMS, and CloudWatch, focusing on availability and reliability.
- Developed automated server health and availability jobs for offline detection, expiration warnings, monitoring, and stakeholder notifications, reducing manual effort by 98% (250+ minutes to 5 minutes).
- Improved production monitoring and alerting coverage from 60% to 95% by implementing Grafana on AWS EC2.
- Automated operational and deployment activities using Python, Shell, Terraform, Ansible, and Jenkins, reducing repetitive manual work.
- Optimized parallelized multi-node deployment pipelines with fallback mechanisms, reducing deployment time from 2.5 hours to under 35 minutes and enabling a 5x increase in daily deployments.
- Built a reusable Jenkins dynamic dependency resolver for multi-environment builds, supporting 20+ release requests through one job.
- Implemented HashiCorp Vault secret injection for Kubernetes workloads and supported Docker, Helm, NGINX Ingress, and Istio deployments and troubleshooting.
- Supported production incidents, RCA, troubleshooting, release management, and executed 10+ RHEL 7 to RHEL 8 upgrades with near-zero traffic disruption.
- Established release and operational SOPs, coordinated activities across approximately 6 teams, and automated release notes and deployment summarization for multi-tier environments.

Key Project

Railway Wheel Defect Detection Platform | Production Environment

- Supported a production platform deployed across 12 railway sites for automated wheel-defect detection.
- Contributed to production reliability, deployment, monitoring, troubleshooting, incident support, and release management.

Education

B.Tech in Mechanical Engineering | BVC College of Engineering (JNTUK) | CGPA: 7.52

July 2016 – Sep 2020
