Professional Summary

DevOps Engineer with 5 years of experience designing, automating, and managing AWS cloud infrastructure. Skilled in AWS, Jenkins, Git, Docker, Kubernetes/EKS, Terraform, Ansible, CI/CD, monitoring, security, troubleshooting, and production support. Experienced in infrastructure automation, deployment optimization, and reliable production operations.

Technical Skills

AWS: EC2, EKS, ECR, VPC, S3, EBS, EFS, RDS, IAM, KMS, CloudWatch, CloudFront, CloudTrail

DevOps & CI/CD: Jenkins, Git, CI/CD, Terraform, Ansible, Argo CD, Helm, GitOps

Containers: Kubernetes, Amazon EKS, Docker, ECR, NGINX Ingress, Istio

Programming: Python, Shell

Monitoring: Grafana, Prometheus, CloudWatch, New Relic

Security: HashiCorp Vault, IAM, RBAC, SonarQube, Trivy

Systems & Databases: Linux, RHEL, MySQL, NoSQL, SQL Server, PostgreSQL

Practices: Production Support, Incident Management, RCA, Release Management, SOPs, HA/DR, Troubleshooting, Cost Optimization

Professional Experience

Tata Consultancy Services (TCS) | Hyderabad, India

AWS DevOps Engineer

Dec 2021 – Aug 2026

- Supported AWS and Kubernetes production environments across EC2, EKS, ECR, VPC, S3, RDS, IAM, KMS, and CloudWatch, focusing on availability and reliability.
- Automated infrastructure and deployment activities using Terraform, Ansible, Jenkins, Python, and Shell, reducing repetitive operational effort.
- Optimized parallelized multi-node deployment pipelines with fallback mechanisms, reducing deployment time from 2.5 hours to under 35 minutes and enabling a 5x increase in daily deployments.
- Built a reusable Jenkins dynamic dependency resolver for multi-environment builds, supporting 20+ release requests through one job.
- Improved production monitoring and alerting coverage from 60% to 95% by implementing Grafana monitoring on AWS EC2.
- Developed automated server health and availability jobs for offline detection, expiration warnings, monitoring, and stakeholder notifications, reducing manual effort by 98% (250+ minutes to 5 minutes).
- Implemented HashiCorp Vault secret injection for Kubernetes workloads and supported Docker, Helm, NGINX Ingress, and Istio deployments and troubleshooting.
- Supported production incidents, RCA, troubleshooting, release management, and executed 10+ RHEL 7 to RHEL 8 upgrades with near-zero traffic disruption.
- Established release and operational SOPs, coordinated activities across approximately 6 teams, and automated release notes and deployment summarization for multi-tier environments.

Key Project

Railway Wheel Defect Detection Platform | Production Environment

- Supported a production platform deployed across 12 railway sites for automated wheel-defect detection.
- Contributed to deployment, infrastructure, monitoring, troubleshooting, release management, and production support.

Education

B.Tech in Mechanical Engineering | BVC College of Engineering (JNTUK) | CGPA: 7.52

July 2016 – Sep 2020
